June 29, 2005

To whom it may concern:

Springdale Cemetery in Peoria, Illinois, is nearing the completion of a successful installation of the Axiom developed system. The success is due to the capability of both the software and the Axiom support team. Springdale has certainly provided a true test of the system capability for many reasons.

This historic 150 year old cemetery and mausoleum covers about 280 scenic acres. It has gone through about 20 different owners, each with different record keeping systems – all manual. This was the first venture into computer systems for the operating staff. Also the conversion of the fragile, illegible and often erroneous data to digitized records was a very arduous and labor intensive task. Furthermore, the rugged and hilly terrain was very difficult to map the 70,000 interments.

Also, it was necessary for the software to cover all aspects of cemetery operations including accounting, payroll, marketing, ownership records, interment records, deeds, mapping, etc.

Through it all, the Axiom staff and Springdale Staff have persevered to achieve success. We believe Springdale is well prepared to serve a deserving community and histories society. We also believe the Axiom system will help prepare Springdale for long-term financial success.

Sincerely,

James W. Baldwin
